

RBWC Payment Gateway

Welcome to the developer notes for RBWC Payment Gateway. A WooCommerce for WordPress platform. This page describes how the plugin is built and how you can use it.

Icons are no longer used in configuration tabs

In prior release of the plugin gateway, a Resurs-logo was usually injected into the configuration tab with a javascript as other ways of doing this was prohibited. The last fix that was intended to go live could do this naturally by internal calls to the label. This has however changed somewhere in the WooCommerce-journey, and in v4.x this is no longer possible as WooCommerce uses \$pages data in a different way than the other releases.
